The very latest technology and environmental benefits have been incorporated into the Gerflor flooring installed at Adelaide's first walk in Emergency Clinic at the Tennyson Centre in Kurralta Park. Mipolam Symbioz and Taralay Premium provide the ultimate in hygienic, low maintenance surfaces for this busy medical facility. Colour and design were also important, according to designer Karen Baynes from Baynes Design. "Simple, easy to maintain and durable finishes were specified to meet the client's brief for the clinic," Karen said. "We chose colours to provide a fresh, calming and welcoming experience of emergency healthcare for patients," she added. More than 400 square metres of Gerflor product is featured throughout the walls and floors of this 552 square metre medical complex that provides fast emergency care with extensive specialist support.
